SUMMARY

Flutter Developer with nearly two years of production experience on Mynt, a real-time stock trading app for Android, iOS and Web with 10K+ Play Store downloads. Builds order and options workflows, live market data over WebSockets and Riverpod state management, and carried out the performance audit and security hardening of its ~428K-line codebase. Main author of 93 merged pull requests on a 10-person team; released 13 consecutive versions to Google Play and the App Store. Sole developer of an internal Flutter helpdesk app.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Android, iOS, Flutter Web, Kotlin (Android services)

State management and architecture: Riverpod, Provider, GetIt, go_router, feature-first architecture, Dart isolates

Networking and data: REST APIs, WebSockets, Dio, JSON, flutter_secure_storage, Drift (SQLite), SharedPreferences

Firebase and integrations: Firebase Cloud Messaging, Crashlytics, Analytics, Authentication, Hosting; Razorpay; Google Maps; WorkManager

Performance and quality: Profile-mode performance analysis (frame timing, CPU, memory), widget rebuild optimization, unit and widget testing, static analysis

Release and tools: Git, GitHub pull requests, Google Play Console, App Store Connect, Shorebird code push, Android Studio, VS Code

Also worked with: TypeScript, Next.js, Supabase (PostgreSQL), Node.js, Express, JavaScript, HTML, CSS, Java

PROFESSIONAL EXPERIENCE

Flutter Developer, Zebu Share and Wealth Managements Pvt. Ltd., Chennai **Feb 2025 – Present**

Mynt: stock, F&O, mutual fund and IPO trading app (Android, iOS, Web)

- Delivered core trading features: place and modify order redesign, GTT/OCO and basket orders, option chain with basket-mode buy/sell, and a strategy builder with ready-made straddle and strangle setups.
- Migrated the TradingView chart to a self-hosted charting library with owner-based WebSocket subscriptions, and fixed chart freezes on low-end phones and during symbol switching.
- Ran a performance audit of the 860+ file codebase and implemented the fixes: moved contract-master parsing to background isolates, batched live price ticks, and removed unnecessary widget rebuilds across 400+ call sites. In profile-build testing on a low-end Galaxy A04e, frame stutters fell 96% and median screen load time fell from 1.19 s to 0.41 s.
- Hardened app security: moved session and API tokens to Android Keystore and iOS Keychain with a one-time migration, added SHA-256 certificate pinning, redacted secrets from logs, disabled logging in release builds, and added double-submit guards to about 20 order and payment actions.
- Built product features end to end: mutual fund SIP and basket orders, IPO applications via UPI, P&L reports with a calendar heatmap, profile Re-KYC (Digio eSign, DigiLocker, nominee) and an in-app support ticketing system with attachments.
- Released 13 consecutive versions to Google Play and the App Store (v1.0.64 to v1.0.89, Mar–Sep 2026), handling versioning, release builds and store submission, including the Android 16 KB page-size update.
- Main author of 93 merged pull requests (335 commits), the highest pull request count on the team.

Mynt Web (Flutter Web)

- Built the desktop web trading interface: multi-panel layout, positions, holdings, order book, funds and place/modify order screens. Optimized watchlist WebSocket handling and fixed memory growth on login reload.

Internal apps

- **Helpdesk app:** sole developer of a Flutter staff app for the company helpdesk (osTicket API): tickets, tasks, SLA plans, knowledge base, reports and exports, push notifications and automatic token refresh. About 42K lines with 380+ automated tests, released with Shorebird code push and in-app update prompts.
- **Call Tracker:** built a Flutter and Kotlin Android app that records business calls and matches them to device recordings, using a native foreground service, call-state monitoring, and WorkManager background sync with an offline queue. Matched 35 of 35 test calls to the correct recording on Android 16.
- **eKYC onboarding (Feb–Apr 2025):** built account-opening screens in Flutter for mobile and email OTP, PAN, nominee validation, trading preferences and UPI bank verification on iOS.

Admin Executive (IT and Network), Capricorn Food Products India Ltd., Chennai **Aug 2023 – Jul 2024**

- Supported desktops, LAN and printers, and managed user accounts and domains on Windows Server 2003/2008.
- Maintained IT asset inventory and system documentation.

SELECTED PROJECTS

Drone Services Booking App (freelance) | Flutter, Riverpod, go_router, Dio, Firebase, Razorpay, Google Maps

- Built a Flutter app for booking drone services and buying drones, with phone OTP login, location-based booking, Razorpay payments and push notifications.

Business Software Factory | Next.js, TypeScript, Supabase, Tailwind CSS, Vitest | github.com/NeverReallyOver/business-software-factory

- Reusable SaaS starter with authentication, role-based access, user invites, audit logging and row-level security on PostgreSQL.

Trading Assistant | Dart, Flutter (private repository)

- Modular Dart workspace with a signal engine, backtester and options strategy toolkit for Indian index options, covered by 500+ automated tests.

Crypto Research | Flutter, Riverpod, Node.js, Express, TypeScript | github.com/NeverReallyOver/crypto-research

- Crypto market app with charts, watchlist and statistics, served by a caching Node.js backend that keeps the API key off the device.

EDUCATION AND TRAINING

B.E., Computer Science and Engineering, ARM College of Engineering and Technology **2022**
Aggregate: 73.5%

Java Full Stack Development, Pumo Technovation, Chennai **Jul 2024**

Flutter and Dart self-study (full time) **Aug 2024 – Jan 2025**
